

Histology & Histomorphometry Core
EMAIL: ENDOCRINEHISTOCORE@PARTNERS.ORG

Consultation Service

We provide guidance to all investigators interested in the design and execution of studies required to analyze tissue phenotypes.

This includes suggestions of choices of tissue handling, fixation, decalcification, processing, sectioning and staining.

We develop and implement new protocols for ISH, IHC, lineage tracing, and histomorphometry analysis. You may consult us for selection of antibodies and antigen retrieval methods and troubleshooting various histology techniques. We are focused on providing cost-effective recommendations suitable for your project needs.

We provide ongoing formal education and training on all services offered by the Core. To request a consultation click here (<mailto:endocrinehistocore@partners.org>).
